

HERBERT WERTHEIM COLLEGE OF ENGINEERING

POWERING THE NEW ENGINEER TO TRANSFORM THE FUTURE

Agile Practices: Beyond IT

Mr. Michael Cottmeyer Entrepreneur in Residence

New Engineering Building, Room 102
Thursday, October 20, 2016 • 4:45 PM
Food and refreshments to follow

The concept of “agile” extends beyond software development. Companies face increasing pressures to be fast and nimble. And engineers - and other technologists - are challenged with solving problems and commercializing solutions using methods that have a positive impact on an organization’s processes and practices. But how do innovative leaders achieve desired results - without diminishing the quality of the organization’s products, services, and processes?

The answer lies at applying agile practices beyond software development and IT. Learn from successful entrepreneur and UF Gator Engineering alum Mike Cottmeyer how “agile” is the way to go for 21st century engineers and technologists. Mr. Cottmeyer, who serves as Entrepreneur in Residence in the Herbert Wertheim College of Engineering Innovation Institute, will take session participants on an interactive, insightful, and informative journey involving all things agile.

Following the presentation there will be time to connect with Mr. Cottmeyer and to network with fellow Gator Engineers.
